

CON-485-PE9

RS-232 To RS-485 Converter – DB9
Datasheet Revision 1.3

INTRODUCTION:

The SerialComm CON-485-PE9 is a bi-directional port powered RS-232 to RS-485 converter in a 9 pin format. It can convert any standard full duplex RS-232C port to any two-wire balanced half duplex RS-485 port. In simple terms, it will convert any RS-232 signal to a RS-485 signal and vice versa. The unit is powered from the RS-232 data lines. It also supports data direction auto-turnaround. Therefore, no external power or flow control is required. The data direction auto-turnaround automatically enables the RS-485 driver when data is present on the RS-232 side making the device plug-and-play, requiring no software drivers. The CON-485-PE9 has a DB9 female connector on the RS-232 side and either a DB9 male connector or 3-way terminal block on the RS-485 side. Separate terminal block is included in package.

TROUBLESHOOTING INSTRUCTIONS:

Perform a loop back test on two CON-485-PE9 converters. Attach the two CON-485-PE9s to two serial ports on a PC and using two instances of a HyperTerminal program send a character from one and see if it echoes to the other. This will test both transmit and receive functions.
