

ETH-FIBER-SM 10/100M Ethernet To Fiber Optic Single Mode 20KM Converter

SERIALCOMM.COM

Datasheet Revision 2.8

GENERAL FEATURES:

- Fiber Point to Point 20KM SM Configuration
- Plug-and-Play (hot-pluggable)
- Externally Powered
- Fiber optic range of up to 12.4 miles (20 KM)
- Available with ST or SC type connectors
- Data direction auto-turnaround no flow control necessary
- Built-in surge and static protection
- 5-year manufacturer's warranty
- CE, FCC, RoHS and REACH certified

DESCRIPTION:

The SerialComm ETH-FIBER-SM is a bi-directional externally powered 10/100M Ethernet to Single Mode Fiber Optic Converter which converts a standard 10/100BaseTX to 100BaseFX Single Mode SC or ST connector type fiber optic link. A data direction auto-turnaround feature automatically enables the Ethernet transmit and receive data signals when data is present, avoiding the need for software drivers, and making the device fully plug-and-play. The ETH-FIBER-SM supports straight-through (MDI) or crossover (MDX) cable configurations. The ETH-FIBER-SM has a RJ45 connector for the 10/100M Ethernet port, and either an ST type or SC type connector for the fiber optic link. The unit extends the maximum distance of any 10/100M Ethernet signal up 12.4 miles (20 KM) using SM fiber optic cable. The unit is enclosed in a rugged steel housing. An external power supply is included.

TROUBLESHOOTING INSTRUCTIONS:

Using one ETH-FIBER-SM unit:

- 1. Perform a loop back test on one unit:
 - a) Plug the power connector to the converter.
 - b) Connect the Ethernet port to a PC. Connect fiber in to fiber out.
 - c) Running a Ethernet Analyzer program on the PC, send ASCII characters to the ETH-FIBER-SM converter from one PC port, and check that the characters are received at the same PC port. This tests that the transmit and receive functions of the ETH-FIBER-SM unit is working properly.

Using two ETH-FIBER-SM units:

- 1. Check that all connections comply with the connection diagrams.
- 2. Perform a loop back test on two units:
 - a) Plug the power connector to both converters.
 - b) Connect the fiber optic in of one converter and fiber optic out to the other converter.
 - c) Connect the fiber optic out of one converter and fiber optic in to the other converter.
 - d) Connect the Ethernet connections to two Ethernet ports.
 - e) Running Ethernet Analyzer programs on both PCs, send ASCII characters to the ETH-FIBER-SM converter from one PC port, and check that the characters are received at the 2nd PC port. Repeat the test in the opposite direction. This tests that the transmit and receive functions of both ETH-FIBER-SM units are working properly.
