DESCRIPTION:
The SerialComm CON-485/422-EE4 is an industrial grade bi-directional externally powered 2.5K isolated RS-232C to RS-485/RS-422 converter which converts a full-duplex RS-232 port to a full-duplex four-wire RS-485 or full-duplex four-wire RS-422 port. A built-in data direction auto-turnaround feature automatically enables the RS-485/RS-422 driver when data is present from the RS-232 port, eliminating the need for software drivers, and making the device fully plug-and-play. The CON-485/422-EE4 has a db-9 female connector on the RS-232C serial port, and either a db-9 male connector, RJ45 female connector or terminal block with built-in 120 Ohm termination option. The terminal block plugs into the RS-485/RS-422 port, providing screw-lug wire terminations for the port. The unit is enclosed in a heavy duty steel housing for rugged applications.

TERMINATION GUIDE:
The CON-485/422-EE4 terminal block has an optional built-in 120 ohm termination. 120 ohm termination is an advanced feature typically used to reduce noise and signal reflections. It is recommended to use 120 Ohm termination if you are exceeding 600 feet in distance, 19.6K baud or in a noisy environment. The terminal blocks are shipped with 120 Ohm termination off but can be turned on using the convenient jumper setting located on the left bottom of the terminal block.

TROUBLESHOOTING INSTRUCTIONS:
Using one CON-485/422-EE4 unit:
1. Check that all connections comply with the connection diagrams.
2. Perform a loop back test on one unit:
   a) Connect the TX+ to RX+ and TX- to RX- on the RS-485/RS-422 port.
   b) Connect the RS-232 port to the PC RS-232 port.
   c) Running a hyper terminal program on the PC, send ASCII characters to the CON-485/422-EE4 converter from one PC port, and check that the characters are received at the same PC port. This tests that the transmit and receive functions of the CON-485/422-EE4 unit is working properly.

Using two CON-485/422-EE4 units:
1. Check that all connections comply with the connection diagrams.
2. Perform a loop back test on two units:
   a) Connect the two RS-485 or RS-422 ports.
   b) Connect the two RS-232 ports to two PC RS-232 ports.
   c) Running hyper terminal programs on both PCs, send ASCII characters to the CON-485/422-EE4 converter from one PC port, and check that the characters are received at the 2nd PC port. Repeat the test in the opposite direction. This tests that the transmit and receive functions of both CON-485/422-EE4 units are working properly.
