TROUBLESHOOTING INSTRUCTIONS:

Using one USB-232-2 unit:
1. Perform a loop back test on one unit:
   a) Connect the TX to RX on the RS232 port.
   b) Connect the USB connector on the cable to the USB port of the computer.
   c) Install the USB / RS232 FTDI driver on the computer per instructions provided.
   d) Running a hyper terminal program on the PC, send ASCII characters to the USB-232-2 converter from one PC port, and check that the characters are received at the same PC port. This tests that the transmit and receive functions of the USB-232-2 unit is working properly.
   e) When there is constant RX data you should see the GREEN light blink. When there is constant TX data you should see the RED light blink.

Using two USB-232-2 units:
1. Perform a loop back test on two units:
   a) Connect the two TX to RX and RX to TX on two USB-232-2 RS-232 ports. Or connect TX to TX and RX to RX with a null modem.
   b) Connect the USB connectors on the cables to two USB ports on the computer.
   c) Install the USB / RS232 FTDI driver on the computer per instructions provided.
   d) Running hyper terminal programs on both PCs, send ASCII characters to the USB-232-2 converter from one PC port, and check that the characters are received at the 2nd PC port. Repeat the test in the opposite direction. This tests that the transmit and receive functions of both USB-232-2 units are working properly.
   e) The GREEN light should flash when there is RX data and RED when there is TX data.

**DESCRIPTION:**
The SerialComm TTL-232-33P is a bi-directional port powered RS-232C to 3.3V TTL converter which converts a full-duplex RS-232 port to a 3.3V TTL signal. A built-in data direction auto-turnaround feature automatically enables the TTL driver when data is present from the RS-232C port, eliminating the need for software drivers, and making the device fully plug-and-play. The TTL-232-33P has a db-9 female connector on the RS-232 serial port, and db-9 male connector on the TTL port. A separate terminal block is included with the product. The terminal blocks plugs into the TTL port, providing screw-lug wire terminations for the port. The unit is enclosed in a rugged ABS housing, and is powered from the RS-232 data lines; no external power is required.
